Project Code: STLU0002 Project Name: Missouri Likely Voters Prepared for: Steven Rogers and Evan Rhinesmith Interviews: 931 Field Period: September 24, 2020 – October 07, 2020 Project Manager: Sam Luks – 650.462.8009

YouGov interviewed 1,063 respondents with an oversample of African-American respondents who were then matched down to a sample of 931 likely voters to produce the final dataset. The full set of survey starts were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from the Missouri registered voter portion of the 2018 Current Population Study voter supplement with selection within strata by weighted sampling with replacements.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, and a two-way stratification of gender and age (4-categories) from the Missouri voter file to produce the final weight.
